

Krishna Kant Sharma

Senior Software Engineer (5+ YOE) Full-Stack | AI/ML Engineering | Distributed Systems Architectures

in LinkedIn | ☎ +91 8445080110 | ✉ kksharmaz786@gmail.com | 🌐 GitHub | 🌐 meetkk.netlify.app

Skills

- **System Architecture:** Microservices, Multi-Tenant Systems, Event-Driven Architecture (Bull Queues, Redis), WebSockets, SSE Streaming, CI/CD, Docker
- **AI & ML:** LLMs (GPT-4o, Claude, Gemini), RAG, MCP, LangChain, Vector Databases (pgvector), Tool / Function Calling, Prompt Engineering, Python
- **Backend:** Node.js, Express.js, AdonisJS 6, TypeScript, REST, PostgreSQL, MySQL, Redis, Sequelize
- **Frontend:** React.js, Redux Toolkit / Saga, TypeScript, JavaScript, Material-UI, TailwindCSS, HTML, CSS
- **Cloud & DevOps:** AWS (S3, EC2), GCP, Docker, Bitbucket CI, Sentry, Postmark

Experience

Devslane **Founding Engineer & Senior Full-Stack AI Engineer** Jun 2021 - Present

Second Chair / Portia

Feb 2025 - Mar 2026

- **AI-Native Legal Workspace:** Architected the core engine behind an AI-native legal workspace – document-aware chat, automated redlining, and multi-stage review – wiring **LangChain**, **tool calls**, and **SSE streaming** across an **AdonisJS 6** + **React** stack.
- **Multi-Tenant RAG:** Built a **RAG** pipeline with **per-scope vector isolation** across cases, clients, and statutes on **pgvector** with cosine-similarity retrieval and a **Redis** cache for sub-second reads, eliminating **40% of manual review workload**.
- **Multi-Model Orchestration:** Ran **GPT-4o**, **Claude**, and **Gemini** in parallel via async generators, streaming a side-by-side “second opinion” comparison view used daily by attorneys and cutting research turnaround by **60%**.
- **Document Review & Redlining:** Engineered a **structured-output diffing system** – LLM edits diffed against the source, surfaced in a **React** diff view, and persisted as **immutable, fully attributable versions**; ingestion handles **PDF / DOCX / MD / TXT** with semantic chunking, reducing manual drafting time by **70%**.

HeartSuccess

Oct 2024 - Feb 2025

- **Drug-Pricing Aggregation:** Built a patient-first **HealthTech** platform that consolidates scattered drug-pricing data into one place, comparing medication savings across pharmacies and discount programs.
- **Pricing Integrations:** Integrated multiple third-party **pricing APIs** into a normalized **PostgreSQL** model, surfacing multi-pharmacy savings comparisons through a **React + Node.js / TypeScript** stack.
- **Patient Impact:** Enabled patients to afford life-saving care and have informed, data-backed conversations with their providers.

Surfside Foods — Frozen

Nov 2023 - Oct 2024

- **Production Management:** Built a production-management platform for frozen seafood operations covering daily production goals, **lot & box tracking**, marination batches, and input-weight estimates.
- **Automated Reporting:** Delivered automated production-summary reporting with Excel (**exceljs**) and PDF (**jsPDF**) exports across a **React + Material-UI** plant-floor UI with shift / downtime notifications, reducing manual reporting effort by **55%**.

Matrix Rental Solutions

Oct 2022 - Nov 2023

- **High-Scale Platform:** Built and scaled an applicant-and-landlord rental platform that crossed **15,000+ MAU**, owning onboarding, **identity / income verification**, and landlord decisioning dashboards across web and mobile-friendly flows.
- **Ability-to-Pay Scoring:** Built a deterministic **scoring service** integrating real-time income, asset, and rental-history data into decision-ready application packages, cutting manual review time by **50%**.
- **Workflow Automation:** Replaced **PDF / email** back-and-forth with an auditable, status-driven pipeline that cut application-to-approval time by **~50%** and reduced operational overhead.
- **Multi-Tenant RBAC:** Hardened **access control** across landlord, property-manager, and applicant roles, with structured **audit logging** for fair-housing compliance review.

Surfside Foods — Fresh

Jun 2021 - Oct 2022

- **Operations Platform:** Built an end-to-end fresh seafood operations platform (harvest, packing, distribution, yield reporting) plus a **zero-downtime sync engine** bridging legacy on-prem and cloud via **idempotent, replayable migrations**.
- **Backend Domains:** Modeled dozens of **TypeScript / Sequelize** domains – boats, harvest locations, coolers, shift / break tracking, packing, distribution, and yield – with **S3-backed SOP / inspection storage** and a tightened **CI pipeline** (TSLint, Prettier, Husky).

Achievements

- **Team Leadership:** Led and mentored a team of **8 developers** across multiple product squads, owning architecture, code reviews, and delivery.
- **Academic Standing:** Graduated in the **Top 3%** of the cohort at **GLA University**.
- **Real-World Impact:** Shipped production solutions to **real-world business problems** across legal-tech, PropTech, and operations – from AI-native review pipelines to high-scale rental platforms.

Education

- **B.Tech in Computer Science, GLA University** (2018 - 2022), Mathura
- **Class XII (PCM), CBSE Board** – Rajendra Lohia Vidya Mandir, Hathras
- **Class X, CBSE** – Maharishi Vidya Mandir, Aligarh
